

PIPELINE CONSTRUCTION

LONG-DISTANCE GAS PIPELINE SOUTH BRITTANY
Pleyben - Priziac, France

LONG-DISTANCE GAS PIPELINE SOUTH BRITTANY

Pleyben - Priziac, France

Client: GRTgaz, SA

MAX STREICHER GmbH & Co. KG aA – in a joint venture with two French companies – is responsible for the execution of a 56 km pipeline (DN 400) in Brittany/France. STREICHER takes over the technical management of the project.

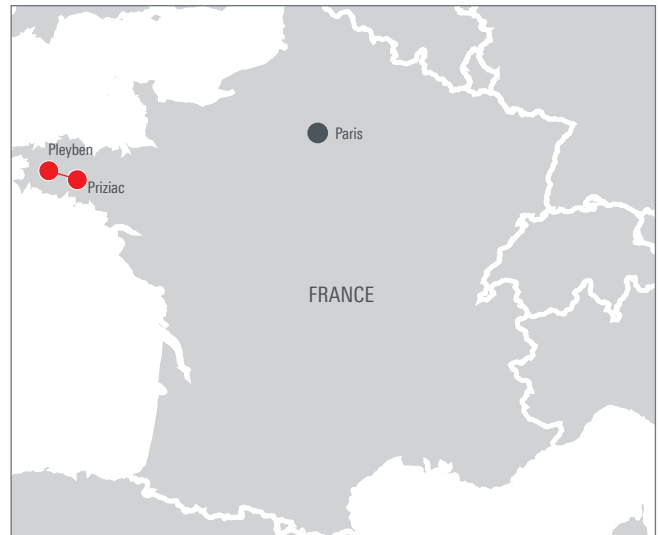

The scope of the order includes all civil engineering and pipeline works, various crossings using different methods and the installation of a transfer station.

The acceptance of the pipeline is planned for spring 2022.

The project's aim is to supply natural gas to the combined cycle power plant in Landivisiau, currently being built by Direct Energie (TOTAL). In addition, the project is of great importance for industrial consumers and households in the Brest region, since the additional transport capacities can significantly increase the security of supply in southern Brittany.

Projekt-Details

Client	GRTgaz, SA
Scope of service	Civil engineering, pipeline construction, crossings, Valve and pig stations and a transmission station
Location	Pleyben - Priziac, France
Total length	56 km
Pipe diameter	DN 400
Design pressure	DP 71
Wall thickness	6,5 and 9,2 mm
Construction period	February 2021 - spring 2022

Characteristics

- Use of the CMT (Cold Metal Transfer) welding method
- Construction of the pipeline in an extremely rocky area

Location:

Pleyben - Priziac, France (Brittany)

● — ● Execution by STREICHER (joint venture)
